

Accomplices of Creation

The Support for Creation programme is the R+D+i of the street arts, public space and non-conventional. The new programme continues the project begun 8 years ago and gives it a new impulse to turn it into an integral laboratory to assess and accompany the creative processes in the long term.

4 great novelties

1. Classification of the projects according to typology and needs of the project.
2. Training in the fields of artistic follow-up, market assessment, project management, intellectual property and copyright, legal support, financing and technical assessment.
3. Impetus for the last step on the chain of value for the artistic residences: distribution and market.
4. New systems for evaluation of the projects.

To make it work, we need “accomplices of creation” who participate and add their knowledge and capacities to the programme to give the projects solidity and sustainability.

Who are our accomplices?

Those persons, institutions, organisations, companies and equipment interested in following the programme and participating with finance, in kind and/or knowledge to make projects included in the programme happen.

How can one become an accomplice of the project?

By joining one of the agreements that we propose or making specific agreements that adapt to the objectives of all the agents involved.
